

uncloud roll

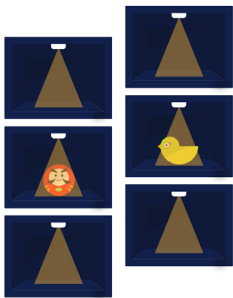

Add rolls, change roles

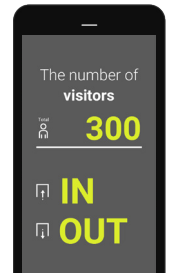

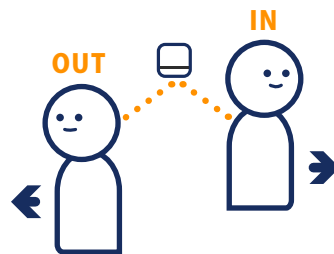

One set of the roll device allows for four different configurations and uses.

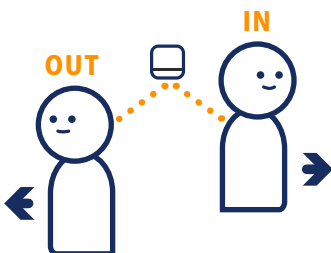

One "roll"
can detect objects
in front of it.

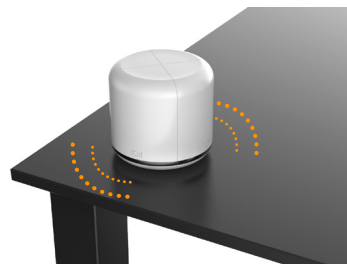

Two "rolls"
can detect and
count people passing by.

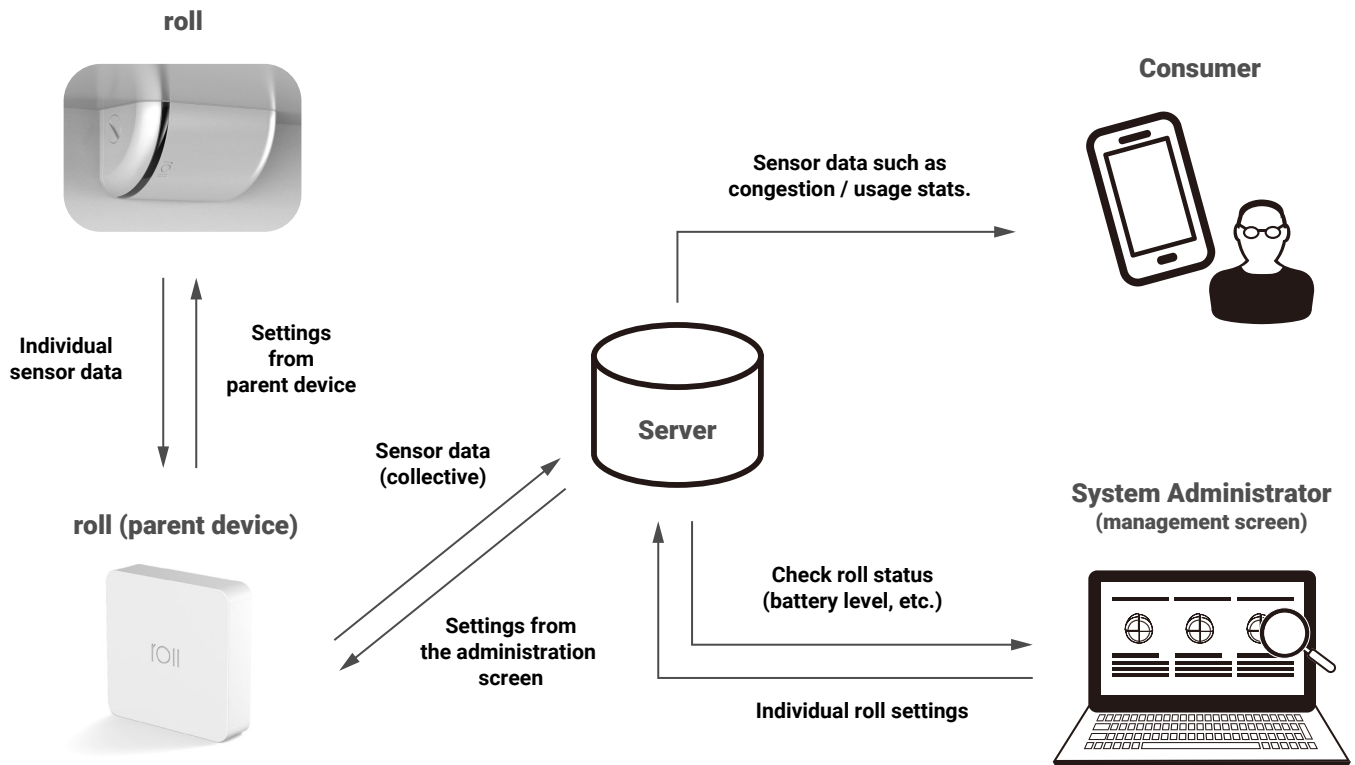

Three "rolls"
increases the versatility
of installation placement.

Four "rolls"
allows you to sense
360 degrees.

System overview

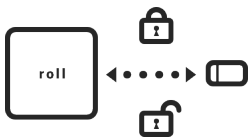

roll (parent device)

The information acquired by rolls is sent to the cloud through the hub.
You can view this information from the website.

Future prospects

Planned implementations in the near future

You can manage your rolls in the roll terminal with the hub.

For example, you can lock rolls in order to prevent theft.

AI makes optimal recommendations.

AI will analyze the data and provide congestion predictions.

It uses Wi-Fi charging.

The roll operates with minimal power. By supporting Wi-Fi charging, you won't need to uninstall rolls for charging.
